EMPLOYMENT OPPORTUNITY

Technician or Associate Scientist/Engineer *Stormwater Monitoring and Assessment Focus*

We are pleased to announce a job opportunity for a highly motivated environmental technician or associate level scientist or engineer who will work out of our Oakland office on projects that focus on water quality monitoring/assessment and pollutant source identification and control. These projects help our municipal clients comply with federal and state regulations, which require the management of hydrologic and pollutant impacts associated with stormwater (urban) runoff. The selected applicant will help protect and restore Bay Area surface waters (e.g., local creeks), including the San Francisco Bay, and work under the direction of heavily experienced project scientists or engineers. Tasks that the selected applicant may assist with, include the following:

- Assisting in the field and the office on programs and projects that are designed to evaluate the level of trash/litter in the environment using on-land visual trash assessment and creek/channel monitoring protocols.
- Conducting biological assessments and water quality monitoring in the field as part of a team under the direction of a project scientist or engineer.
- Assisting in the field and the office on water quality monitoring programs and projects, including studies designed to: 1) assess water quality and biological integrity in receiving waters; 2) characterize pollutant concentrations in urban runoff and receiving waters; 3) identify pollutant/stressor sources associated with stormwater runoff; and 4) assess the effectiveness of stormwater management actions.
- Maintaining and calibrating field equipment and ordering/tracking monitoring supplies and equipment.
- Evaluating environmental monitoring and assessment data to draw conclusions and form recommendations that will protect and improve surface water quality in the Bay Area.

We seek individuals who are highly self-motivated and work well with other team members and clients. At a minimum, this position requires a Bachelor's Degree in Environmental Science, Environmental Engineering, or a related field of study OR at least four years of relevant work experience. This position also requires good verbal communication and computer skills (e.g., Microsoft Word and Excel). Experience in using relational databases, Geographic Information Systems (GIS), and statistical software packages is desired.

We offer a highly competitive compensation package, commensurate with education and experience. To apply, please submit a resume and cover letter by e-mail or mail to:

Chris Sommers
Assistant Operations Manager
EOA, Inc., 1410 Jackson Street, Oakland, CA 94612
